Appendix C CPS Employment Rates

The joint probabilities of participation and employment from the CPS are summarized in Table 11 and Table 12 (for males and females respectively) in the following pages. Collectively referred to as employment rates, these statistics combine with probabilities of life to form the building blocks of the worklife expectancy statistics by work disability category. Appendix A (page 84) provides a detailed description of the computation process. The Data Sources section (page 21) discusses the derivation of the CPS disability categories, noting that these data are extracted from the Annual Social and Economic Supplement (ASEC) of the Current Population Survey. The introduction to “The Tables” (page 61) provides the definition of the disability categories and education levels used. As shown in Table 13 through Table 62, the surveys from 1996 through 2005 were pooled to develop the statistics.

Table 11 CPS PE Rate Summary for Males

Disability Status	Age Groups
