Appendix D ACS Employment Rates

The joint probabilities of participation and employment from the ACS are summarized in Table 63 and Table 64 (for males and females respectively) in the following pages. Collectively referred to as employment rates, these statistics combine with probabilities of life to form the building blocks of the worklife expectancy statistics by functional disability category. Appendix A (page 84) provides a detailed description of the computation process. The Data Sources section (page 23) discusses the derivation of the ACS disability categories. The introduction to “The Tables” (page 61) provides the definition of the disability categories and education levels used. As shown in Table 66 through Table 105, the surveys from 2001 through 2004 were pooled to develop the statistics. Table 65 presents the imputation of the employment rates for Severe Disability as described in Appendix A.
